Mark A. Lewis to Retire from Electralloy February 2023

Oil City, PA / December 6, 2022: Electralloy announces that Mark A. Lewis, Melt Products Sales Manager, will retire effective February 1, 2023.

Mr. Lewis started his career at Electralloy in 1979 in our Raw Materials department. He later helped promote our sales efforts in the pig and ingot product lines and most recently served as sales manager in our melt products division. During his lengthy tenure, he helped navigate Electralloy through the best as well as some of the most difficult of times the steel industry has experienced.

“With over 40 years of dedicated service to Electralloy and our industry as a whole, Mark has proven to be an integral part of this organization. His hard work, commitment, and dedication are worthy of admiration,” said Tracy Rudolph, President / COO of Electralloy. “We are grateful for his loyalty and tireless work effort – all for the betterment of our customers, vendors, and fellow employees.”

Please join us all in congratulating Mark as he begins the next chapter of his life in retirement.

For Release: December 6, 2022

Electralloy is North America's premier stainless, nickel, and copper-nickel alloy steel mill – producing a wide range of products including ingot, billet, round bar, forged block, and master alloy pig ingot. Electralloy is also the exclusive licensed producer of all NITRONIC® products including weld wire and weld consumables. By combining our renowned AOD refining capabilities and world-class VAR and ESR remelting, Electralloy produces alloys with remarkably consistent quality and superior cleanliness that are ideal for gears, pumps, valves, bearings, piping, scrubbers, heat exchangers, die blocks and more. Electralloy is dedicated to continual quality improvement. All of our products are melted and manufactured in our facilities and in complete compliance with all DFARS and Buy American Act specifications. You can count on Electralloy for specialty alloys that offer you uncompromising quality for the toughest, most critical applications in markets such as aerospace, power generation, nuclear forging, military, automotive, marine, agriculture and chemical.
